

100 Days of Azure DevOps

Day 8 Handout — Test plans, suites, test cases & traceability

Learning in public · Personal lab only · Educational content · Not a sales pitch

Architecture A — test plans hierarchy

Level	What it represents	Example / Usage
Test Plan	Top-level milestone, release, or sprint test container	Phase 1 Smoke Tests
Test Suite	Logical grouping of test cases (Static, Requirement, Query)	Portal & CLI Baseline
Test Case	Step-by-step action + expected outcome (reproducible)	TC01: Verify Azure login
Test Run	Execution record capturing Pass, Fail, Blocked, and attachments	Run via Web Test Runner

Architecture B — automated CI vs test plans traceability

Testing track	Where it runs	Best suited for
Automated CI Tests	Build pipeline (az pipelines / runners)	Unit tests, linting, regression, fast feedback
Manual & Exploratory	Azure Test Plans + Web Test Runner	UAT, UI flows, exploratory edge cases, acceptance
Traceability loop	User Story ↔ Test Case ↔ Run ↔ Bug	Full visibility from backlog requirement to defect

One-liner to remember

Automated tests verify what you expected · Test Plans track what humans must prove · Traceability links both to the board

Step-by-step lab (20–30 min)

In **azure-100-labs** (enable Test Plans basic/trial access if prompted):

- 1 Open **Test Plans** → create Test Plan **Phase 1 Smoke Tests**
- 2 Add a Static Suite named **Portal & CLI Baseline**
- 3 Add Test Case: **TC01 — Verify Azure login & personal directory**
- 4 Add Test Case: **TC02 — Verify resource group creation via CLI**
- 5 Define step-by-step *Action* and *Expected result* for each test case
- 6 Click **Run for web application**, step through, and mark results (Pass / Blocked)
- 7 Link a test case to a User Story on Azure Boards to verify the traceability chain

Test case steps example

```
TC01 Step 1: Run 'az account show -o table' → Expected: Shows personal sub/tenant ID
TC01 Step 2: Open portal.azure.com → Expected: Correct personal directory shown
TC02 Step 1: Run 'az group create -n rg-lab-smoke -l centralindia' → Expected: Succeeded
TC02 Step 2: Run 'az group delete -n rg-lab-smoke --yes --no-wait' → Expected: Exit 0
```

Done checklist

- I can explain Test Plan vs Suite vs Case vs Run

- Test Plan and 2 Test Cases created in azure-100-labs
- Executed a test run in the Web Runner
- Test case linked to a User Story on Boards

Tomorrow — Day 9

Azure Artifacts — package management feeds, upstream sources, and dependency hygiene.
