

100 Days of Azure DevOps

Day 12 Handout — GitFlow vs GitHub Flow vs Trunk-Based

Learning in public · Personal lab only · Educational content · Not a sales pitch

Architecture A — branching model comparison

Model	Branch Structure	Best For	Main Risk
GitFlow	main + develop + feature/release/hotfix	Scheduled releases, multi-version prod	Late integration, merge debt
GitHub Flow	main + short feature/*	Continuous delivery, one prod line	main must stay deployable
Trunk-Based	main (+ branches < 1 day)	High velocity, mature CI/CD	Needs feature flags + discipline

Architecture B — how to choose a model

Decision Factor	GitFlow Signal	Trunk-Based Signal
Release cadence	Fixed schedule (monthly/quarterly)	Deploy multiple times per day
Prod versions	2+ versions supported simultaneously	Single production line
Team size	Large, role-separated (dev/QA/release)	Small, full-stack ownership
CI maturity	Can tolerate longer integration windows	Requires fast, reliable automated tests

One-liner to remember

Branching strategy is a delivery decision · Pick complexity that matches how often you actually ship

Step-by-step lab (20–30 min)

In your local clone of **azure-100-labs**:

- 1 Create branch: **git switch -c feature/day12-branching-adr**
- 2 Create ADR: **docs/branching-strategy.md**
- 3 Document decision: **GitHub Flow** — protected main, feature/* < 2 days
- 4 Specify: PR required, squash merge, no develop/release branches
- 5 Commit: **git commit -m 'docs: add branching strategy ADR'**
- 6 Push: **git push -u origin feature/day12-branching-adr**
- 7 Open Pull Request in Azure Repos

ADR skeleton

```
# Branching Strategy – azure-100-labs
# Decision: GitHub Flow (trunk-based lite)
# - main: protected, always deployable
# - feature/*: short-lived (< 2 days)
# - PR required; squash merge
# - No develop, release/, or hotfix/ branches
```

Done checklist

- I can compare GitFlow, GitHub Flow, and Trunk-Based
- ADR docs/branching-strategy.md created in azure-100-labs
- Feature branch pushed with ADR commit
- PR opened (or ready to open) in Azure Repos

Tomorrow — Day 13

Azure Repos setup — remotes, permissions, and repository hygiene.
