

100 Days of Azure DevOps

Day 5 Handout — Boards, Repos, Pipelines, Tests, Artifacts

Learning in public · Personal lab only · Educational content · Not a sales pitch

What you will understand today

- **Boards** for planning and tracking work
- **Repos** for source control and PR reviews
- **Pipelines** for CI/CD automation
- **Test Plans** for manual and exploratory test cases
- **Artifacts** for package feeds and dependency sharing

High-level architecture — service map

Architecture A — idea to delivery

Step	Service	Outcome
1	Boards	Work item planned and prioritized
2	Repos	Code committed and reviewed
3	Pipelines	Build/test/deploy executed
4	Test Plans	Manual or exploratory validation captured
5	Artifacts	Packages published and versioned

Architecture B — each hub's role

Service	Best used for	Signal of healthy usage
Boards	Backlog, sprint planning, traceability	Stories map to commits and releases
Repos	Branch strategy and code reviews	PR workflow with clear history
Pipelines	Repeatable CI/CD	Same pipeline runs for every change
Test Plans	Structured manual testing	Pass/fail tied to work items
Artifacts	Reusable package feeds	Versioned dependencies, no ad-hoc binaries

One-liner to remember

Boards plan · Repos store · Pipelines ship · Test Plans validate · Artifacts distribute

Step-by-step lab (20–30 min)

Create and explore one personal Azure DevOps project end-to-end. No production data.

- 1 Create personal org at <https://dev.azure.com>
- 2 Create project **day05-overview** (Agile, private)
- 3 Create one User Story in Boards
- 4 Initialize repo with README in Repos
- 5 Open New Pipeline wizard and select your repo (no run required)
- 6 Open Test Plans and Artifacts hubs once to understand layout

Quick reference

Portal: <https://dev.azure.com/<your-org>>
Project: <https://dev.azure.com/<your-org>/day05-overview>
Hubs: Boards | Repos | Pipelines | Test Plans | Artifacts

Done checklist

- I can explain what each of the five hubs does
- I created a project and touched each service once
- I can describe the flow from work item to deployment

Tomorrow — Day 6

Setting up an Azure DevOps organization with clean defaults and access boundaries.
