

100 Days of Azure DevOps

Day 10 Handout — Five hubs + ARM hygiene in one personal project before Git gets serious

1 - Azure & DevOps Foundations · Personal lab only · Educational content · Not a sales pitch

Architecture A — Phase 1 map (what must exist before Day 11)

Track	Days	Proof in azure-100-labs
Cloud models	1	Can name IaaS/PaaS/SaaS + region vs AZ
Clients + ARM	2–3	az group + tags/locks understood; lab RGs gone
CALMS / DORA	4	docs/calms-dora-day04.md (local or in repo)
Five hubs	5–9	Boards tree, Test Plan, Artifacts feed
Org hygiene	6	Personal org; PCA = you; project private Agile
Git bootstrap	10	README on default branch; clone URL works
Cost	1–3 leftover	az group list has no rg-day0* labs

Architecture B — hub wiring for Phase 2/3 (decide what you will not redo)

Hub	Phase 1 state	Do not invent later
Boards	Epic + Feature + stories + WIP	A second parallel backlog
Repos	Git repo + README	TFVC 'because enterprise'
Pipelines	Hub opened; YAML waits until Day 21	Classic release for labs
Test Plans	Day08 Smoke executed	Excel test matrix
Artifacts	day09-packages + upstreams	Checking in bin/*.dll
Dashboard	Query chart of open stories	Screenshot-only status

Architecture C — pitfalls that fake a capstone

Pitfall	What you see	Fix
Empty README	Initialize clicked, still 'add some code'	Commit a real README.md via Git or Files UI
Repo in day05-overview only	Home project has no Git	Use azure-100-labs as the canonical repo
Orphan Azure RGs	rg-day01-lab still billed	az group delete leftover rg-day0*
Dashboard on work org	Widgets show employer queries	Delete it; recreate in personal org
Public README with sub IDs	Subscription GUID on the internet	No IDs, no PATs, no email lists
Skipping Boards because Git is coming	Phase 2 PRs with no AB#	Keep the Epic; you will link from Day 14

One-liner to remember

Phase 1 recap: cloud models, Portal/CLI, ARM, CALMS/DORA, and the five hubs — foundations before pipelines.

Step-by-step lab (personal Azure / Azure DevOps only)

Personal project azure-100-labs. Initialize Git, dashboard, and cost cleanup. No employer remotes.

- 1 Boards: confirm Epic 100 Days Learning, Feature Phase 1 Foundations, at least 3 stories. Fix if missing.
- 2 Repos → Files. If empty: Initialize with a README. If clone exists, skip to the git commands below.
- 3 Locally: git clone https://dev.azure.com/<org>/azure-100-labs/_git/azure-100-labs && add README content && git push.
- 4 Overview → Dashboards → New dashboard Phase 1 Command Center → add Chart for work items using query Open stories.
- 5 Artifacts: confirm feed day09-packages. Test Plans: confirm Day08 Smoke still exists.
- 6 az group list --query "[?starts_with(name, 'rg-day')].{name:name, loc:location}" -o table → delete leftovers.
- 7 Write 5 lines in README: what stuck, what was confusing. Personal voice. No client names.

Bootstrap the lab repo and audit leftover resource groups

```
git clone https://dev.azure.com/<org>/azure-100-labs/_git/azure-100-labs
cd azure-100-labs
printf '%s\n' '# Azure 100 Labs' 'Personal learning repo for #100DaysOfAzureDevOps' > README.md
git add README.md
git commit -m "docs: bootstrap lab repo"
git push -u origin HEAD
az group list --query "[?starts_with(name, 'rg-day')].name" -o tsv
```

Done checklist

- Can recap IaaS/PaaS/SaaS, ARM tags/locks, CALMS, DORA, five hubs
- azure-100-labs has Git README + Boards tree + Artifacts feed + Test Plan
- Dashboard widget exists from a real query
- No leftover rg-day* resource groups (or listed why kept)

Tomorrow — Day 11

Git fundamentals
