

100 Days of Azure DevOps

Day 100 Handout — The first public proof you can ship learning on purpose — then schedule the next slice

10 - Portfolio & Public Launch · Personal lab only · Educational content · Not a sales pitch

Architecture A — launch is a last-mile checklist, not a vibe

Piece	Live today	Still homework
Capstone README	Stranger can follow How to run	TODO badges and a missing diagram
Pins	Personal GitHub pins the sanitized demo	test / new-folder still in the window
Case study	Pages or Dev.to link works	Draft only in a local folder
LinkedIn recap	Day 100 document, personal account	Workplace detail in the celebration
Azure leftovers	Destroyed or budget-alerted	Forgotten AKS / ACR / App Service plans
Next cycle	docs/next-100.md with five goals	Goals only in your head

Architecture B — five next-100 goals (pick, do not collect all)

Goal type	Example (policy permitting)	Not a goal
Certification study	Weekend list from Day 96, then a real exam date later	'AZ-400 certified' written today
Depth	AKS or GitOps on a personal cluster you will destroy	A second 12-service rewrite
Capstone hardening	Add one brake: tracing, slot swap, or better tests	Payments and ML
Writing	Four more public labs, same classroom rules	A storefront, a packaged offer
Paid work (optional)	Only if Day 98 policy allows	Targeting an employer's customers

Architecture C — finish-line pitfalls

Pitfall	What you see	Fix
Half README	Pinned repo, closed blinds	Finish How to run, then pin
Leftover bill	Lab SKUs survive the parade	az group list; delete or budget
Employer leak in the recap	Workplace story in Day 100	Celebrate the public labs only
Streak, not a practice	No next-100 file	Five goals in markdown
Storefront turn	Sales CTA on the victory post	Classroom to the last sentence

One-liner to remember

Day 100 is not the finish line — it is the first public proof you can ship learning on purpose.

Step-by-step lab (personal Azure / Azure DevOps only)

Personal GitHub, personal Azure, personal LinkedIn. Celebrate without leaking workplace detail. Destroy what still bills.

- 1 Pin sanitized repos on personal GitHub. Open the capstone as a stranger; fix How to run if it fails.
- 2 Publish the Day 100 LinkedIn recap from your personal account. No employer names, no client stories, no sales CTA.
- 3 Write five goals in docs/next-100.md (cert study, deeper AKS, tougher capstone slice, more public labs, optional paid work only if policy allows).
- 4 az account show (personal sub) then az group list -o table. Delete leftover lab RGs or confirm a budget alert is on.

- 5 Confirm Cost Management budget + Day 77 habit still hold. A launch that keeps billing is a trap you set for yourself.
- 6 Tick the launch checklist in that file: portfolio live, README polished, recap live, resources destroyed or budgets set, next plan written.
- 7 Then stop. Go outside. Finish lines are for races; this was a practice.

Day 100 checklist — proof, cleanup, next slice

```
# docs/next-100.md
# [ ] Portfolio live (pinned capstone + case study URL)
# [ ] Capstone README polished (How to run works as a stranger)
# [ ] LinkedIn Day 100 recap live (personal account, no workplace leak)
# [ ] Leftover RGs destroyed or budgets set
# [ ] Five next-100 goals written (policy permitting)
az account show --query "{name:name,id:id}" -o table
az group list -o table
# Delete what you do not need. Then go outside.
```

Done checklist

- Capstone pinned and README works as a stranger
- Day 100 recap posted with no employer leak and no sales CTA
- docs/next-100.md has five goals
- Personal subscription leftovers destroyed or budget-alerted
- You treated this as a practice, not a storefront

After Day 100

Keep going — the next 100 days are a file you already wrote, not a vibe
