

100 Days of Azure DevOps

Day 20 Handout — Branch, PR, policy, squash — Git with receipts, not 'save file'

2 - Azure Repos & Git Mastery · Personal lab only · Educational content · Not a sales pitch

Architecture A — Phase 2 system map (what 'done' means)

Capability	Days	Proof
Four Git areas + objects	11	notes/day11.md + git log
Branching ADR	12	docs/branching-strategy.md = GitHub Flow
Layout + gitignore	13	/src /docs /pipelines /infra
PR template + AB#	14	.azuredevops/pull_request_template.md
Rebase/conflict literacy	15	Resolved conflict; no force on main
Client hooks vs policies	16–19	commit-msg + main policies
Import + ACL	17–18	imported-sample + Deny force push

Architecture B — the path a change must take after today

Step	Command / UI	Gate
Branch	git switch -c feature/day20-recap	Never commit on main
Commit	conventional subject	Optional client commit-msg
Push	git push -u origin HEAD	ACL: Contribute on feature refs
PR	template + AB# + reviewers	Policies on main
Squash complete	Delete source branch	Limit merge types
Default branch	main SHA updated	Pipeline will trigger here in Phase 3

Architecture C — pitfalls that fake a Phase 2 recap

Pitfall	What you see	Fix
Merged by bypass	PCA bypassed policies 'to save time'	Undo with a proper PR; document the miss
README still empty of workflow	Clone instructions only	Add How we use Git here pointing at the ADR
Policy never blocked anything	You never tried git push main	Repeat Day 19 proof; keep the error text
Feature branch left forever	stale feature/day11-*	Delete after squash; Repos → Stale branches
Work Git history in imported-sample	Employer file paths	Delete that repo; start a public sample
No DORA proxy yet	Lead time still vibes	Tomorrow pipelines give timestamps

One-liner to remember

Phase 2 recap: Git is not 'save file' — it is collaboration with receipts, policies, and fewer 2am disasters.

Step-by-step lab (personal Azure / Azure DevOps only)

Personal azure-100-labs. Run the full path once: branch → commit → PR → squash → delete branch. Policies must have blocked a bad PR or push.

- 1 Confirm Branch policies on main (reviewer, work item, squash). If missing, restore Day 19.
- 2 git switch main && git pull && git switch -c feature/day20-recap
- 3 Append README section How we use Git here with a link to docs/branching-strategy.md
- 4 git add README.md && git commit -m "docs: document git workflow" && git push -u origin feature/day20-recap
- 5 Open PR → fill template → link a User Story → squash complete → tick delete source branch.
- 6 Try a non-compliant PR (no work item) or push to main; confirm it is blocked. Close/abandon the bad PR.
- 7 Repos → Branches: stale feature/* deleted. Update Boards story to Done.

End-to-end feature branch for the Phase 2 recap

```
git switch main
git pull origin main
git switch -c feature/day20-recap
printf '\n## How we use Git here\nSee docs/branching-strategy.md\n' >> README.md
git add README.md
git commit -m "docs: document git workflow"
git push -u origin feature/day20-recap
# Azure Repos: PR → squash merge → delete feature/day20-recap
```

Done checklist

- Can describe the required path to main without saying 'just push'
- README documents the Git workflow + ADR
- A non-compliant PR or direct push was blocked once
- Happy-path squash merge completed; source branch deleted

Tomorrow — Day 21

Intro to Azure Pipelines
