

100 Days of Azure DevOps

Day 77 Handout — The best Azure skill is deleting things you can name

8 - Monitoring & Observability · Personal lab only · Educational content · Not a sales pitch

Architecture A — the personal-sub cost stack

Control	Azure object	What it actually does
Cost Analysis	Microsoft.CostManagement / Portal Cost Analysis	Filter by resource group, meter, tag
Budget + alert	Microsoft.Consumption/budgets	Email/Action Group before the invoice, not after
Advisor cost recs	Microsoft.Advisor recommendations (Cost)	Idle SKUs, reserved-instance noise; still a list, not a bill
Resource graph	az group list / az resource list	Orphans: Public IP, Basic ACR, forgotten AKS
IaC destroy	terraform destroy / az deployment ... --mode Complete	Delete the way you created, or Portal if it was click-ops

Architecture B — decide per leftover, not a fictional savings %

Finding	Default	Do not
RG named rg-dayNN with no lab this week	az group delete --yes --no-wait	Invent a 37% savings number you did not measure
AKS / Container Apps still running	Destroy tonight if the weekend already passed	Leave it 'for the capstone someday'
Budget alert still at Day-1 default	Lower amount or tighten filter to this sub	Ignore the email because 'it is only a lab'
Orphan Public IP / disk	Delete the resource, then the empty RG	Keep the RG because empty looks free
Created with Terraform/Bicep	destroy / delete the deployment first	Portal-delete one child and leave state lying

Architecture C — pitfalls that eat a silent subscription

Pitfall	What you see	Fix
Empty RG folklore	No VMs, still a Public IP meter	az resource list -g <rg> -o table before you shrug
Basic ACR / idle AKS	Small daily drain you forget	Delete registry or cluster; do not 'right-size' a lab you are not using
Budget as a sticker	Alert never fired; invoice did	Cost Management → Budgets → edit amount + contact
Wrong subscription in CLI	You listed a work sub by accident	az account show; switch to the personal sub
Destroy skipped 'until later'	Day 56 RG alive on Day 77	Today is the due date

One-liner to remember

The best Azure skill is deleting things — empty RGs are silent subscriptions eating money.

Step-by-step lab (personal Azure / Azure DevOps only)

Personal subscription only. az account show must not be a work tenant. Project azure-100-labs for notes.

- 1 az account show -o table. Confirm the personal subscription name and ID. Stop if it is not yours.
- 2 Portal → Cost Management + Billing → Cost Analysis. Filter last 30 days by resource group. Write the top three meters in docs/cost-day77.md (no invented %).

- 3 Cost Management → Budgets. Tighten the lab budget alert (amount or filter). Note the new threshold in the markdown.
- 4 az group list -o table. Mark every RG that is not part of this week's lab.
- 5 Delete unused groups: az group delete -n <old-rg> --yes --no-wait. If born from Terraform/Bicep, destroy from that tool first.
- 6 If AKS, a Basic ACR, or a leftover Public IP is still listed, delete it today. Then re-run az group list.

CLI — list, then delete leftovers on the personal subscription

```
az account show --query "{name:name,id:id,tenant:tenantId}" -o table
az group list -o table
az resource list --query "[].{rg:resourceGroup,type:type,name:name}" -o table
# After you confirm the RG is a leftover lab:
az group delete -n rg-day56-aks --yes --no-wait
```

Done checklist

- az account show is the personal subscription
- Wrote top Cost Analysis meters without a fake savings percentage
- Budget alert tightened
- At least one unused RG deleted, or wrote 'none leftover' with the group list
- docs/cost-day77.md on the personal repo

Tomorrow — Day 78

Azure Advisor and the Well-Architected pillars — one recommendation, one written decision
