

100 Days of Azure DevOps

Day 89 Handout — Platform engineering is DevOps that productized the paved road

9 - Advanced & Enterprise · Personal lab only · Educational content · Not a sales pitch

Architecture A — a 50-dev catalog mapped to Azure DevOps

Capability	What a developer gets	You already have the seed
App pipeline template	One YAML call, pinned SDK	Day 82 templates/build.yml
RG + budget bootstrap	Named RG + a budget alert	Day 77 Cost Management
Secret fetch	Key Vault reference, not a .env in Git	Phase 7 variable group / KV
Env promotion	Same artifact, approvals on staging/prod	Day 39 / Environments
Golden-path docs	How to open a PR that ships	docs/ that pipelines actually use
Optional sixth	Project scaffold (repo + pipeline file)	azure-100-labs as the example path

Architecture B — ticket theater vs self-service

Ask from a 50th developer	Ticket theater	Paved road
New app pipeline	Platform queue, three days	Copy a template; CI on first PR
New RG	Someone with Owner clicks Portal	Bootstrap pipeline + budget
Prod deploy	Ping a human in chat	Environment approval + checks
Node version bump	14 YAML PRs	One template parameter
Exception to policy	Shadow IT in a personal cloud	Documented exemption at the MG

Architecture C — platforms that do not scale

Pitfall	What you see	Fix
Only-no platform	Queue of refusals; shadow pipelines	Ship a catalog; version it
Wiki mural	Golden Path.docx nobody's YAML uses	Guardrails in the template, not only in prose
Fake org chart	Invented VP names and headcount	Hypothetical 50-dev catalog; no logos
Unversioned templates	Breaking change lands on every app Friday	Tag the template repo / path + changelog
Work portal screenshot	Internal developer portal of an employer	List capabilities in markdown only

One-liner to remember

Platform engineering is DevOps that productized the paved road.

Step-by-step lab (personal Azure / Azure DevOps only)

Hypothetical 50-dev org — hypothetical means hypothetical. Personal repo only. No customer names.

- 1 List five platform capabilities in docs/platform-catalog-day89.md that you would want as the 50th developer.
- 2 Map each row to Azure DevOps: template path, Environment, variable group, budget, or docs file.
- 3 Include pipeline template, RG+budget bootstrap, golden-path docs, plus two you care about (secret fetch, env promotion).
- 4 Write one 'ticket theater' example you are replacing (e.g. 'please make a pipeline').

- 5 Add a versioning note: how a template change reaches consumers without a Friday surprise.
- 6 Do not invent a customer, a headcount chart, or a sales pitch. The catalog is the lab.

Catalog seed — self-service ideas that already map to this series

```
# docs/platform-catalog-day89.md (outline)
# - app pipeline template      → templates/build.yml (Day 82)
# - RG + budget bootstrap     → az group create + consumption budget
# - golden path docs          → docs/golden-path.md (PR → CI → env)
# - secret fetch              → Key Vault task / variable group
# - env promotion              → Environments + approvals; same Build.BuildId
# Version the templates. A paved road nobody walks is a mural.
```

Done checklist

- Five capabilities listed and mapped to Azure DevOps + templates
- Hypothetical catalog only — no logos, no customers
- docs/platform-catalog-day89.md committed
- Ticket theater vs paved road written once
- Posted the LinkedIn document

Tomorrow — Day 90

Phase 9 recap — one template, two consumers, one green run each
