

100 Days of Azure DevOps

Day 90 Handout — Enterprise is reuse plus guardrails, not more YAML copy-paste

9 - Advanced & Enterprise · Personal lab only · Educational content · Not a sales pitch

Architecture A — Phase 9 artifacts you can point at

Day	Artifact	Still true?
81	ADR: lab stays monorepo	Unless you changed it on purpose
82–90	templates/ consumed by two pipelines	Definition of done today
83	Marketplace: one spice or written zero	No mystery publishers
84	Jenkins map on paper	Guarantees, not blue balls
85–88	Risks, DR drill, LZ sketch, GitOps note	Paper architecture counts
89	Five paved-road capabilities	Templates are the road, not a mural

Architecture B — done means two green consumers

Check	Pass	Fail
One template file	templates/build.yml (or sibling) is the contract	Two copies of the same steps
Two callers	Two YAML pipelines pass parameters in	You duplicated YAML to go green
Two green runs	Each consumer has a green build today	One green, one 'will fix later'
Guardrails	No secrets in the template; hosted pool default	PAT in parameters.default
Path filters	A change in consumer A does not have to rebuild B	World rebuild on a README typo

Architecture C — recap pitfalls

Pitfall	What you see	Fix
Duplicated to go green	templates/ exists and so do pasted twins	Delete the twins; call the template
Third unique snowflake	A leftover pipeline still on Node 18	Extract or admit leftover homework
Enterprise font	Slide language, one consumer	Reuse + a gate that still bites
Guardrail regression	Template echoes a secret	Fail the recap; move to KV
Work template library	You export an employer YAML library	Personal repo only

One-liner to remember

Phase 9 recap: enterprise is reuse + guardrails, not more YAML copy-paste.

Step-by-step lab (personal Azure / Azure DevOps only)

Personal Azure DevOps project azure-100-labs. Same-repo templates/. Microsoft-hosted ubuntu-latest.

- 1 Finish templates/ so one file is the build contract (projectPath and any SDK pin).
- 2 Create or update two sample pipelines that both call that template with different paths (even if the second only echoes).
- 3 Run both pipelines. Capture two green run IDs in docs/phase9-recap.md.
- 4 Grep the repo for duplicated restore/build steps outside the template. Extract or list as leftover homework.

- 5 Re-read the Day 81 ADR. Still monorepo unless you wrote a new decision.
- 6 Link Days 83–89 notes (marketplace, Jenkins map, multi-cloud risks, DR, landing zone, GitOps, catalog).
- 7 Do not add a third unique pipeline to look enterprise.

Two consumers — one template, two green runs

```
# azure-pipelines-a.yml
pool:
  vmImage: ubuntu-latest
steps:
- template: templates/build.yml
  parameters:
    projectPath: src/demo-shipboard

# azure-pipelines-b.yml
pool:
  vmImage: ubuntu-latest
steps:
- template: templates/build.yml
  parameters:
    projectPath: src/samples/second
```

Done checklist

- One template, two consumers, two green run IDs written down
- No secret defaults in the template
- docs/phase9-recap.md links the Phase 9 paper artifacts
- Did not duplicate YAML just to go green
- Posted the LinkedIn document

Tomorrow — Day 91

Capstone 1 — a thin public demo slice you can walk in five minutes, not a new ecommerce
