

100 Days of Azure DevOps

Day 96 Handout — The labs are the study guide you already wrote — the outline names the missing chapters

10 - Portfolio & Public Launch · Personal lab only · Educational content · Not a sales pitch

Architecture A — map 100 days to exam-shaped buckets

Outline bucket (typical)	You already practiced	Often a gap
Design a DevOps strategy	Days 4–10, 81, 89 — boards, repos, paved road	Org-scale governance you only sketched
CI / YAML / agents	Days 21–34, 82 — ubuntu-latest, templates	Self-hosted scale sets if you stayed hosted
Release / CD / gates	Days 35–42, 91 — artifacts, envs, approvals	Canary / ring depth you only read
IaC + config	Days 43–50, 93 — Bicep or Terraform	The dialect you did not pick
Secure / Key Vault / Policy	Phase 7, Days 19, 83	Microsoft Defender depth, Test Plans depth
Feedback / Monitor	Days 71–80 — Insights, alerts, analytics	KQL you skipped; Application Insights sampling

Architecture B — tick practiced vs schedule a gap

Evidence	Tick practiced	Weekend list
You deployed a slot / env approval	CD gates	Canary math you never ran
You ran plan/what-if	IaC	The dialect you did not pick
You only read the doc	Do not tick it	That row on the outline
You never opened Test Plans	Do not tick it	A short Learn module, not shame
Tonight's urge to binge 6 hours	Mapping only	A weekend list with a few bullets

Architecture C — review pitfalls

Pitfall	What you see	Fix
Fake credential	Bio says AZ-400 before the exam	Review is review
Dump of dumps	Random PDFs, no outline	Official skills list first
Tick unread rows	A green checklist you cannot speak	Labs beat flashcards; mark skimmed vs never
Schedule exam in the post	Pressure theater	This handout does not book a Pearson slot
Invent a score	'I would get 85%'	No score without an exam

One-liner to remember

AZ-400 rewards people who built things — your labs are the study guide you already wrote.

Step-by-step lab (personal Azure / Azure DevOps only)

Personal study notes in azure-100-labs. Official Microsoft Learn outline only. No fake pass, no exam booking required today.

- 1 Open the official AZ-400 skills outline on Microsoft Learn (exams/az-400). Save the link in docs/az400-gaps-day96.md.
- 2 Tick each objective: practiced in these 100 days / skimmed / never. Honesty is the lab.
- 3 Write a weekend study list of the never/skimmed rows only — a few bullets, not the whole outline.

- 4 For three practiced rows, write the lab artifact that proves it (pipeline file, Insights alert, infra plan).
- 5 Do not write AZ-400 certified on a profile. Do not invent a score. Do not cram the whole outline tonight.
- 6 Optional: add the outline PDF or a screenshot of the contents table — not a brain-dump site.

Gap file — outline first, binge never

```
# docs/az400-gaps-day96.md
# Outline: https://learn.microsoft.com/credentials/certifications/exams/az-400/
# Practiced:
#   - YAML CI / templates          → templates/build.yml, Day 82/90
#   - Env promotion + approvals    → capstone pipeline, Day 91
#   - Key Vault / no secrets in Git → Phase 7 + capstone README
#   - Monitor + alert              → Day 80 forced fail
# Gaps (weekend list, not tonight):
#   - <paste 3-7 outline rows you never touched>
# Review is review. No fake credential.
```

Done checklist

- Official outline opened and linked
- Practiced vs skimmed vs never ticked honestly
- Weekend gap list written; no 6-hour hero binge claimed
- No unearned AZ-400 title, no invented score
- docs/az400-gaps-day96.md on the personal repo

Tomorrow — Day 97

Mock interview prep — say five answers out loud, including the failure path
