

100 Days of Azure DevOps

Day 20 Handout — Git mastery checkpoint

Learning in public · Personal lab only · Educational content · Not a sales pitch

Architecture A — Phase 2 map (Days 11–20)

Days	Theme	Outcome
11–12	Fundamentals & branching	Daily Git loop + ADR
13–15	Repos, PRs, history hygiene	Reviewable changes
16–17	Hooks, forks, permissions	Local + access guardrails
18–19	Migration & branch policies	main is a contract
20	Capstone	Documented How we use Git here

Architecture B — capstone loop

Step	Action	Policy check
1	feature branch from main	No direct push to main
2	Commit + push	Hooks may run locally
3	Open PR + link work item	Reviewers + work items
4	Squash merge + delete branch	Merge type limited

One-liner to remember

Git mastery is not memorizing flags · It is making the safe path the easy path

Step-by-step lab (20–30 min)

In project **azure-100-labs**:

- 1 Confirm Day 19 policies still on **main**
- 2 Create **feature/day20-phase2-recap**
- 3 Add README section: **How we use Git here**
- 4 PR → linked work item → squash merge → delete branch
- 5 Write **docs/phase-2-recap.md**

Capstone commands

```
git switch main && git pull
git switch -c feature/day20-phase2-recap
# edit README.md – How we use Git here
git add README.md && git commit -m "docs: document how we use Git here"
git push -u origin feature/day20-phase2-recap
```

Done checklist

- Happy-path PR completed under policies
- README documents the Git workflow

- docs/phase-2-recap.md written

Tomorrow — Day 21

Intro to Azure Pipelines — Phase 3 begins (CI/CD).
