

100 Days of Azure DevOps

Day 7 Handout — Hierarchy, backlog, board & queries

Learning in public · Personal lab only · Educational content · Not a sales pitch

What you will understand today

- **Epic** → **Feature** → **Story** → **Task/Bug** — planning hierarchy
- **Backlog** — prioritized list of work
- **Board** — visual flow (To Do, Doing, Done)
- **Queries** — saved filters (e.g. open stories)
- **WIP** — limit work in Doing so flow stays honest

High-level architecture

Architecture A — work item hierarchy

Level	Example (this series)	Finish when
Epic	100 Days Learning	Series complete
Feature	Phase 1 Foundations	Phase recap done
User Story	Day 8 — Test Plans lab	Lab + post done
Task	Create test plan, add 2 cases	Checklist ticked

Architecture B — board columns

Column	Meaning	Warning sign
New / To Do	Accepted, not started	Huge backlog, no grooming
Active / Doing	In progress now	20+ items — WIP explosion
Resolved / Done	Finished	Done without demo or review

One-liner to remember

Backlog = might do · Board = doing now · Query = forgot to close

Step-by-step lab (20–30 min)

Project: **azure-100-labs** (from Day 6). Personal org only.

- 1 Boards → create Epic **100 Days Learning**
- 2 Add Feature **Phase 1 Foundations** under the Epic
- 3 Add 3 User Stories (e.g. Days 8–10 topics)
- 4 Open Board → move one story To Do → Doing → Done
- 5 Queries → new query: Type = User Story AND State <> Done

Example story titles

- Explore Azure Test Plans
- Create Azure Artifacts feed
- Stand up end-to-end mini project

Done checklist

- I can explain Epic → Feature → Story in one sentence each
- Hierarchy exists in azure-100-labs
- One story moved to Done on the board
- Open-stories query created

Tomorrow — Day 8

Azure Test Plans basics — structured testing beyond “we clicked around.”
