

100 Days of Azure DevOps

Day 10 Handout — Azure & DevOps Foundations Capstone

Learning in public · Personal lab only · Educational content · Not a sales pitch

Architecture A — Phase 1 foundations master matrix

Phase 1 Track	Days & Key Concepts	Core Deliverable / Proof
Azure Foundations	Days 1–3: Cloud models, CLI/PWSH, ARM & Locks	Resource hierarchy, Tags & Budget alerts
DevOps Culture	Day 4: CALMS principles, DORA metrics	Flow & Deployment Frequency mindset
Azure DevOps Hubs	Days 5–9: Boards, Repos, Test Plans, Artifacts	Project azure-100-labs, WIP limits, Feeds
Phase 1 Capstone	Day 10: End-to-end integration & Dashboards	Phase 1 Command Center overview live

Architecture B — end-to-end hub integration

Azure DevOps Hub	Role in azure-100-labs	Phase 2 & 3 Evolution
Boards	Epics, Features, User Stories with WIP limits	Work item linking to branches & PRs
Repos	Git repository initialized with README.md	Branch policies, PR gates, merge strategies
Test Plans	Phase 1 Smoke Tests plan with manual test cases	Automated test integration via CI pipelines
Artifacts	day09-packages feed with upstream sources	Publishing & consuming build packages
Dashboards	Phase 1 Command Center with query charts	Pipeline health, DORA & sprint telemetry

One-liner to remember

Foundations are not the boring part of DevOps · They are the guardrails that keep future CI/CD pipelines from automating chaos

Step-by-step lab (20–30 min)

In **azure-100-labs** (verify all Phase 1 foundations before Phase 2):

- 1 Verify **Boards**: confirm Epic, Feature, and User Stories exist with WIP limits
- 2 Verify **Repos**: clone locally, commit README.md, and push to main
- 3 Verify **Test Plans**: confirm Smoke Test plan is linked to a User Story
- 4 Verify **Artifacts**: confirm day09-packages feed has upstream sources active
- 5 Navigate to **Overview** → **Dashboards** → create **Phase 1 Command Center**
- 6 Add widgets: Query Tile (Open stories), Work item chart, and Project Markdown
- 7 Run Azure CLI cost audit: confirm zero orphan lab resource groups remain active

Bootstrap & governance commands

```
git clone https://dev.azure.com/<org>/azure-100-labs/_git/azure-100-labs
git commit -m 'docs: bootstrap Phase 1 lab repo' && git push origin main
az group list --query "[?starts_with(name, 'rg-lab-')].name" -o table
```

Done checklist

- Completed Phase 1 (Days 1–10) foundations
- All 5 hubs active & verified in azure-100-labs
- Phase 1 Command Center dashboard created
- Azure subscription clean of unwanted lab resources

Tomorrow — Day 11 (Phase 2 Begins)

Git Foundations for DevOps Engineers — commits, branches, internals, and clean hygiene.
