

100 Days of Azure DevOps

Day 13 Handout — Layout, gitignore, remotes & permissions

Learning in public · Personal lab only · Educational content · Not a sales pitch

Architecture A — standard repo folder layout

Folder	Purpose	Phase
/src	Application source code	Phase 2+
/docs	ADRs, architecture notes, runbooks	Phase 2 (today)
/pipelines	CI/CD YAML pipeline definitions	Phase 3
/infra	IaC templates (ARM, Bicep, Terraform)	Phase 4+
/notes	Daily learning notes from series	Ongoing

Architecture B — repo hygiene checklist

Hygiene Item	What to configure	Why it matters
Default branch	main (single deployable line)	Clear PR target and pipeline trigger
.gitignore	node_modules, .env, dist/, IDE folders	Secrets and artifacts stay out of history
Remote URL	HTTPS or SSH — verify git remote -v	Consistent clone/push across machines
Permissions	Readers / Contributors / Admins	Least privilege; branch policies on Day 19
Feature branches	Push feature/* not direct to main	Prepares for PR workflow (Day 14)

One-liner to remember

Repo structure is infrastructure · Set it up like you mean to maintain it

Step-by-step lab (20–30 min)

In **azure-100-labs** (Azure Repos):

- 1 Verify default branch = **main** in Project settings → Repositories
- 2 Create branch: **git switch -c feature/day13-repo-setup**
- 3 Create folders: **src/, docs/, pipelines/, infra/**
- 4 Add **.gitignore** (node_modules, .env, dist/, IDE files)
- 5 Add **docs/repo-structure.md** describing each folder
- 6 Commit: **git commit -m 'chore: standardize repo layout and gitignore'**
- 7 Push: **git push -u origin feature/day13-repo-setup**
- 8 Review repo permissions: Contributors vs Readers

.gitignore essentials

```
node_modules/  
dist/ build/  
.env .env.*  
*.log .DS_Store  
.vscode/ __pycache__/
```

Done checklist

- Default branch verified as main
- Standard folder layout committed
- .gitignore blocks secrets and build artifacts
- Feature branch pushed; remote verified

Tomorrow — Day 14

Pull requests & code review — the human gate before merge.
