

100 Days of Azure DevOps

Day 6 Handout — Org, project, process & permissions

Learning in public · Personal lab only · Educational content · Not a sales pitch

What you will understand today

- **Organization** — tenancy, users, collection-level settings
- **Project** — container for Boards, Repos, Pipelines, Test Plans, Artifacts
- **Process template** — Agile / Scrum / Basic / CMMI shapes work items
- **Permissions** — Collection Admin vs Project Admin vs Contributor
- **Personal-only rule** — no work accounts, no employer data

High-level architecture

Architecture A — org stack

Layer	What it controls	Lab choice
Organization	Who can sign in; org-wide settings	Personal Microsoft account only
Project	Where hubs and repos live	azure-100-labs (private)
Process	Work item types and states	Agile for this series
Permissions	What each identity can change	Minimal Collection Admins

Architecture B — permission bands

Role	Typical power	Use carefully
Project Collection Administrators	Org-wide: users, policies, all projects	Keep this list tiny
Project Administrators	One project: settings, repos, pipelines	Fine for lab owners
Contributors	Create work items, push (with policies), run pipelines	Default for team members
Readers	View only	Useful for stakeholders later

One-liner to remember

Org = tenancy and access · Project = where work lives · Keep both personal and clean

Step-by-step lab (20–30 min)

Personal Microsoft account only. Do not invite work users.

- 1 Open <https://dev.azure.com/<your-org>> (create org if needed)
- 2 Org settings → Overview: note name and owner
- 3 Org settings → Users / Permissions: confirm personal-only access
- 4 Create project **azure-100-labs** (Agile process, private)
- 5 Set project description: Personal 100DaysOfAzureDevOps labs — views are my own
- 6 Optional: configure Azure DevOps CLI defaults for org + project

Commands (optional)

```
az extension add --name azure-devops
az devops configure --defaults organization=https://dev.azure.com/<your-org> project=azure-100-labs
az devops project list -o table
az devops project show --project azure-100-labs -o table
```

Done checklist

- I can explain organization vs project
- azure-100-labs exists and is private
- No work accounts were invited

Tomorrow — Day 7

Azure Boards deep dive — Epics, Features, Stories, and honest WIP.

Personal learning handout for LinkedIn series · Views are my own · Not affiliated with any employer · Not legal advice
